Visible result -  
Invisible brace

Fixed orthodontic appliance on the inside:  
Lingual orthodontics

move to **WIN**

# Show your smile...

Lingual orthodontics is the correction of misaligned teeth, using a fixed brace, bonded on the inner surface of the teeth. A lingual brace works in the same way as a conventional fixed brace with full control and movement of the teeth but is nearly invisible, the only person who knows you have a brace is you.

Lingual braces can be for everyone, if you have healthy gums and bones. With Lingual braces, if you are an adult or adolescent, there are individual solutions to individual problems.

# ...not your brace!

**I** The individual bracket base allows for an extremely flat design

**II** The individual bracket body is perfectly adapted to the tooth shape

**III** The individual archwires are bent by computer assisted bending robots

Specifically in the treatment of adult patients, the treatment goal varies according to the individual needs. WIN is a custom made lingual appliance, that can adapt to individual requirements, creating smiles of confidence without compromise.

**I** Predictable results

**II** Suitable for all ages

**III** Extremely flat design = improved comfort

**IV** For simple to complex cases

**V** German engineering = precision manufacturing
